

## RG10 Regulator

The RG10 is a high pressure, direct spring operated, pressure regulator. Its high pressure, heavy duty design makes it ideal for pressure regulation in the oil and natural gas industry. Typical applications include farm taps, first or second cut regulation, transmission to distribution and many other high pressure processes. It has a maximum inlet pressure of 1500 psi and an outlet range of 27-500 psi.

The RG10 also has the ability to be converted into a relief valve. A NACE option is available for sour service.

## Inlet Pressure

The inlet pressure should not exceed the sum of the regulator set point and the max pressure drop.

**Example:**

For a 100 psi set point with a max pressure-drop of 750, the inlet pressure should be kept below 850 psi.

Capacity is based on 20 percent droop unless otherwise noted below.

Grayed out areas indicate that the inlet pressure is too high for a given orifice size.

To convert capacities to another gas, multiply by .775 and divide by the square root of the specific gravity of the desired gas.

To convert SCFH to m<sup>3</sup>/hr multiply by 0.0268
